ADAPTIVE CONTROL

Control of rigid robot manipulators via combination of adaptive sliding mode control and compensated inverse dynamics approach p283
Neuro-adaptive hybrid controller for robot-manipulator tracking control p270
Robust adaptive force/motion control of constrained robots p103
Robust indirect adaptive control of the electrohydraulic velocity control systems p448

AEROSPACE SYSTEMS

Alternative approach to aeroservoelastic design and clearance p1
Analysis of stabilised output error methods p209
Satellite attitude control via sliding mode with perturbation estimation p276
Static controllers for magnetic suspension and balance systems p338

CALIBRATION

Control and integration techniques in a fully automated manufacturing cell for carbon composites p*159*

CLOSED LOOP SYSTEMS

Frequency based tuning of SISO controllers for two-by-two processes p49
Frequency domain design methodology for uncertain cascaded multiple-loop systems with plant modification p409
Loop transfer recovery for systems under sampled measurements p333
Neuro-adaptive hybrid controller for robot-manipulator tracking control p270
Optimal entire eigenstructure assignment of discrete-time linear systems p301
Quadratic guaranteed cost control with robust pole placement in a disk p37
Static controllers for magnetic suspension and balance systems p338

COMPUTATIONAL COMPLEXITY

Adaptive scheduling algorithm based on mixed graph model p9
Intelligent controller design for the ship steering problem p17

COMPUTER APPLICATIONS

A toolbox for minimal state space model realisation p152
Control and integration techniques in a fully automated manufacturing cell for carbon composites p159
Designing a reusable co-ordination module for cooperative industrial control applications p91
Digital redesign of cascaded analogue controllers for sampled-data interval systems p489
Error specification, monitoring and recovery in computer-integrated manufacturing: an analytic approach p499
Graphical method of prediction of limit cycle for multivariable nonlinear systems p423
Intelligent controller design for the ship steering problem p17
Process performance monitoring using multivariate statistical process control p132
Reliable online adaptation of models with variable time delays p417
Telerobot control and real-time simulation environment using parallel processing p543

CONTROL SYSTEMS ANALYSIS

A toolbox for minimal state space model realisation p152
Analysis of linear discrete SISO control systems via a set of delta functions p514
Decentralised control design of uncertain nominally linear symmetric composite systems *p530*
Design and analysis of neural/fuzzy variable structural PID control systems p200
Digital redesign of cascaded analogue controllers for sampled-data interval systems *p489*
Frequency based tuning of SISO controllers for two-by-two processes p49
Frequency domain design methodology for uncertain cascaded multiple-loop systems with plant modification p409
Frequency-shaping LQ control of Maglev suspension systems for optimal performance with deterministic and stochastic inputs p25
Graphical method of prediction of limit cycle for multivariable nonlinear systems p423
Guaranteed rates of convergence of a class of PD controllers for trajectory tracking problems of robotic manipulators with dynamic uncertainties p186
H_2 robust digital vector control for the induction machine p237
Intelligent controller design for the ship steering problem p17
Loop transfer recovery for systems under sampled measurements p333
Modelling and controlling one-degree-of-freedom impacts under elastic/plastic deformations p470
New sufficient condition for robust root clustering of linear state space models with structured uncertainty p244
Note on reachability indices of augmented systems p477
Optimal entire eigenstructure assignment of discrete-time linear systems p301
Optimal strictly positive real approximations for stable transfer functions p537
Output tracking control of uncertain nonlinear systems with an input time delay p309
Parametric uncertainty bounds for performance robustness of linear systems with output feedback p509
PID tuning for integrating and unstable processes p429
Quadratic guaranteed cost control with robust pole placement in a disk p37
Reliable online adaptation of models with variable time delays p417
Robust control of manipulators using the computed torque plus H_∞ compensation method p64
Robust indirect adaptive control of the electrohydraulic velocity control systems p448
Stability of zeros of sampled system with fractional order hold p296
Static controllers for magnetic suspension and balance systems p338
Theory of state covariance assignment for linear single-input systems p289
Two-degree-of-freedom design method of LQI servo systems: use of frequency-dependent weighting matrices for sensitivity reduction p557
User-friendly design method for fuzzy logic controller p358

CONTROL SYSTEM SYNTHESIS

Decentralised control design of uncertain nominally linear symmetric composite systems p530
Design and analysis of neural/fuzzy variable structural PID control systems p200
Digital redesign of cascaded analogue controllers for sampled-data interval systems p489
Frequency domain design methodology for uncertain cascaded multiple-loop systems with plant modification p409
Intelligent controller design for the ship steering problem p17
Quadratic guaranteed cost control with robust pole placement in a disk p37
Robust indirect adaptive control of the electrohydraulic velocity control systems p448
Theory of state covariance assignment for linear single-input systems p289
Two-degree-of-freedom design method of LQI servo systems: use of frequency-dependent weighting matrices for sensitivity reduction p557
User-friendly design method for fuzzy logic controller p358

CYBERNETICS AND ROBOTICS

Anytime heuristic schedule repair in manufacturing industry p114
Control and integration techniques in a fully automated manufacturing cell for carbon composites p159
Control of rigid robot manipulators via combination of adaptive sliding mode control and compensated inverse dynamics approach p283
Convergence analysis of binary relation inference networks p319
Delays versus performance of visually guided systems p436
Design of a distributed software architecture for an intelligent planning system p125
Design of a wire-suspended mobile robot capable of avoiding path obstacles p349
Error specification, monitoring and recovery in computer-integrated manufacturing: an analytic approach p499
Expert robust decentralised controller for uncertain large-scale systems p519
Guaranteed rates of convergence of a class of PD controllers for trajectory tracking problems of robotic manipulators with dynamic uncertainties p186
Hybrid position/force control of a hydraulic underwater manipulator p145
Iterative learning control for discrete-time systems with exponential rate of convergence p217
Learning systems in intelligent control: an appraisal of fuzzy, neural and genetic algorithm control applications p367
Neuro-adaptive hybrid controller for robot-manipulator tracking control p270
Process performance monitoring using multivariate statistical process control p132
Real-time synchronisation of multiaxis high-speed machines, from SFC specification to Petri net verification p164
Robust adaptive force/motion control of constrained robots p103
Robust control of manipulators using the computed torque plus H_∞ compensation method p64
Telerobot control and real-time simulation environment using parallel processing p543
Temporal multiresolution analysis for a quantitative/qualitative interpretation of complex dynamic processes p191
Visiplan: a knowledge-based modelling tool p73

DATA HANDLING

Graphical method of prediction of limit cycle for multivariable nonlinear systems p423
Telerobot control and real-time simulation environment using parallel processing p543

DISCRETE SYSTEMS

Analysis of linear discrete SISO control systems via a set of delta functions p514
Digital redesign of cascaded analogue controllers for sampled-data interval systems p489
H_2 robust digital vector control for the induction machine p237
Identification of linear systems in the presence of piecewise polynomial disturbances p305
Iterative learning control for discrete-time systems with exponential rate of convergence *p217*
Loop transfer recovery for systems under sampled measurements p333
Optimal entire eigenstructure assignment of discrete-time linear systems p301
Real-time synchronisation of multiaxis high-speed machines, from SFC specification to Petri net verification p164
Stability of zeros of sampled system with fractional order hold p296

DISTRIBUTED PARAMETER SYSTEMS

Counter-example to a recent result on stabilisation of feedback control systems with infinite delays [and author's reply] p110
Delays versus performance of visually guided systems p436
Graphical method of prediction of limit cycle for multivariable nonlinear systems p423
Iterative learning control for discrete-time systems with exponential rate of convergence p217
Note on reachability indices of augmented systems p477
Output tracking control of uncertain nonlinear systems with an input time delay p309
Output tracking for linear uncertain time-delay systems p481
Parameterisation of observers for time delay systems and its application in observer design p225
Reliable online adaptation of models with variable time delays p417
Robust stability for perturbed large-scale time-delay systems p233

ELECTROMAGNETISM

Frequency-shaping LQ control of Maglev suspension systems for optimal performance with deterministic and stochastic inputs p25

ELECTRIC VARIABLES CONTROL

Hybrid position/force control of a hydraulic underwater manipulator p145

EXPERT SYSTEMS

Design of a distributed software architecture for an intelligent planning system p125
Designing a reusable co-ordination module for cooperative industrial control applications p91
Visiplan: a knowledge-based modelling tool p73

FEEDBACK

Counter-example to a recent result on stabilisation of feedback control systems with infinite delays [and author's reply] p110
Delays versus performance of visually guided systems p436
Frequency domain design methodology for uncertain cascaded multiple-loop systems with plant modification p409
Iterative learning control for discrete-time systems with exponential rate of convergence p217
Neuro-adaptive hybrid controller for robot-manipulator tracking control p270
Optimal entire eigenstructure assignment of discrete-time linear systems p301
Parametric uncertainty bounds for performance robustness of linear systems with output feedback p509
Robust indirect adaptive control of the electrohydraulic velocity control systems p448
Two-degree-of-freedom design method of LQI servo systems: use of frequency-dependent weighting matrices for sensitivity reduction p557

FORMAL LOGIC

Fuzzy neural networks and application to the FBC process p259
Real-time synchronisation of multiaxis high-speed machines, from SFC specification to Petri net verification p164

FUZZY CONTROL

Design and analysis of neural/fuzzy variable structural PID control systems p200
Fuzzy neural networks and application to the FBC process p259
Learning systems in intelligent control: an appraisal of fuzzy, neural and genetic algorithm control applications p367
User-friendly design method for fuzzy logic controller p358

INDUCTION MOTORS

H_2 robust digital vector control for the induction machine p237

INFORMATION THEORY

Optimal filtering and robust fault diagnosis of stochastic systems with unknown disturbances p31

MATHEMATICAL TECHNIQUES

Adaptive scheduling algorithm based on mixed graph model p9
Analysis of linear discrete SISO control systems via a set of delta functions p514
Analysis of stabilised output error methods p209
Anytime heuristic schedule repair in manufacturing industry p114
Application of Kharitonov's theorem to robustly increase the degree of Hurwitz polynomials p57
Convergence analysis of binary relation inference networks p319
Decentralised control design of uncertain nominally linear symmetric composite systems p530
Frequency-shaping LQ control of Maglev suspension systems for optimal performance with deterministic and stochastic inputs p25
H_2 robust digital vector control for the induction machine p237
Identification of linear systems in the presence of piecewise polynomial disturbances p305
Iterative learning control for discrete-time systems with exponential rate of convergence p217
Learning systems in intelligent control: an appraisal of fuzzy, neural and genetic algorithm control applications p367
Loop transfer recovery for systems under sampled measurements p333
Model predictive control algorithms for systems with slow sampled outputs p551
Model reduction with time delay combining the least-squares method with the genetic algorithm p247
Neural network architectures for parameter estimation of dynamical systems p387
Optimal entire eigenstructure assignment of discrete-time linear systems p301
Parametric uncertainty bounds for performance robustness of linear systems with output feedback p509
Quadratic guaranteed cost control with robust pole placement in a disk p37
Real-time synchronisation of multiaxis high-speed machines, from SFC specification to Petri net verification p164
Reliable online adaptation of models with variable time delays p417
Static controllers for magnetic suspension and balance systems p338
Theory of state covariance assignment for linear single-input systems p289
Two-degree-of-freedom design method of LQI servo systems: use of frequency-dependent weighting matrices for sensitivity reduction p557
Use of multilayer feedforward neural networks in identification and control of Wiener model p255
User-friendly design method for fuzzy logic controller p358
Visiplan: a knowledge-based modelling tool p73

MULTIVARIABLE CONTROL SYSTEMS

Control of rigid robot manipulators via combination of adaptive sliding mode control and compensated inverse dynamics approach p283
Decentralised control design of uncertain nominally linear symmetric composite systems p530
Design and analysis of neural/fuzzy variable structural PID control systems p200
Expert robust decentralised controller for uncertain large-scale systems p519
Frequency based tuning of SISO controllers for two-by-two processes p49
Graphical method of prediction of limit cycle for multivariable nonlinear systems p423
Modelling and controlling one-degree-of-freedom impacts p85
Nonlinear and direction-dependent dynamic process modelling using neural networks p44
Robust adaptive force/motion control of constrained robots p103
Robust stability for perturbed large-scale time-delay systems p233
Satellite attitude control via sliding mode with perturbation estimation p276
Sliding mode control using time-varying switching gain and boundary layer for electrohydraulic position and differential pressure control p325
Temporal multiresolution analysis for a quantitative/qualitative interpretation of complex dynamic processes p191
Time-varying sliding modes for second-order systems p455

NEURAL NETS

Design and analysis of neural/fuzzy variable structural PID control systems p200
Fuzzy neural networks and application to the FBC process p259
Intelligent controller design for the ship steering problem p17
Learning systems in intelligent control: an appraisal of fuzzy, neural and genetic algorithm control applications p367
Neural network architectures for parameter estimation of dynamical systems p387
Neural network learning approach of intelligent multimodel controller p395
Neuro-adaptive hybrid controller for robot-manipulator tracking control p270
Nonlinear and direction-dependent dynamic process modelling using neural networks p44
Use of multilayer feedforward neural networks in identification and control of Wiener model p255

NONELECTRIC VARIABLES CONTROL

Design and analysis of neural/fuzzy variable structural PID control systems p200
Design of a wire-suspended mobile robot capable of avoiding path obstacles p349
Fuzzy neural networks and application to the FBC process p259
Guaranteed rates of convergence of a class of PD controllers for trajectory tracking problems of robotic manipulators with dynamic uncertainties p186
Hybrid position/force control of a hydraulic underwater manipulator p145
Modelling and controlling one-degree-of-freedom impacts p85
Nonlinear and direction-dependent dynamic process modelling using neural networks p44
Robust adaptive force/motion control of constrained robots p103
Robust control of manipulators using the computed torque plus H_∞ compensation method p64
Robust indirect adaptive control of the electrohydraulic velocity control systems p448
Satellite attitude control via sliding mode with perturbation estimation p276
Sliding mode control using time-varying switching gain and boundary layer for electrohydraulic position and differential pressure control p325

NONLINEAR CONTROL SYSTEMS

Application of a full-order extended Luenberger observer for a position sensorless operation of a switched reluctance motor drive p401
Graphical method of prediction of limit cycle for multivariable nonlinear systems p423
Nonlinear and direction-dependent dynamic process modelling using neural networks p44
Output tracking control of uncertain nonlinear systems with an input time delay p309
Reliable online adaptation of models with variable time delays p417
Robust control of manipulators using the computed torque plus H_∞ compensation method p64
Satellite attitude control via sliding mode with perturbation estimation p276

NUMERICAL ANALYSIS

Analysis of stabilised output error methods p209
Iterative learning control for discrete-time systems with exponential rate of convergence p217
Model reduction with time delay combining the least-squares method with the genetic algorithm p247
Robust indirect adaptive control of the electrohydraulic velocity control systems p448
Telerobot control and real-time simulation environment using parallel processing p543

OPTICAL IMAGE PROCESSING

Delays versus performance of visually guided systems p436

OPTIMAL CONTROL

Frequency based tuning of SISO controllers for two-by-two processes p49
Frequency-shaping LQ control of Maglev suspension systems for optimal performance with deterministic and stochastic inputs p25
Guaranteeing feasibility in constrained stable generalised predictive control p463
Iterative learning control for discrete-time systems with exponential rate of convergence p217
Loop transfer recovery for systems under sampled measurements p333
Model predictive control algorithms for systems with slow sampled outputs p551
Optimal entire eigenstructure assignment of discrete-time linear systems p301
Optimal strictly positive real approximations for stable transfer functions p537
Parametric uncertainty bounds for performance robustness of linear systems with output feedback p509
Robust control of manipulators using the computed torque plus H_∞ compensation method p64
Time-varying sliding modes for second-order systems p455
Two-degree-of-freedom design method of LQI servo systems: use of frequency-dependent weighting matrices for sensitivity reduction p557

OPTIMISATION

Anytime heuristic schedule repair in manufacturing industry p114
Frequency based tuning of SISO controllers for two-by-two processes p49
H_2 robust digital vector control for the induction machine p237
Iterative learning control for discrete-time systems with exponential rate of convergence p217
Neural network architectures for parameter estimation of dynamical systems p387
Reliable online adaptation of models with variable time delays p417
Visiplan: a knowledge-based modelling tool p73

PARALLEL PROCESSING

Design of a distributed software architecture for an intelligent planning system p125
Telerobot control and real-time simulation environment using parallel processing p543

PARAMETER ESTIMATION

Analysis of stabilised output error methods p209
Identification of linear systems in the presence of piecewise polynomial disturbances p305
Neural network architectures for parameter estimation of dynamical systems p387
Reliable online adaptation of models with variable time delays p417

POWER SYSTEM CONTROL

Application of a full-order extended Luenberger observer for a position sensorless operation of a switched reluctance motor drive p401
H_2 robust digital vector control for the induction machine p237
Static controllers for magnetic suspension and balance systems p338

POWER SYSTEMS AND APPLICATIONS

Application of a full-order extended Luenberger observer for a position sensorless operation of a switched reluctance motor drive p401
Frequency-shaping LQ control of Maglev suspension systems for optimal performance with deterministic and stochastic inputs p25

POWER SYSTEMS AND PLANTS

Application of a full-order extended Luenberger observer for a position sensorless operation of a switched reluctance motor drive p401
Frequency-shaping LQ control of Maglev suspension systems for optimal performance with deterministic and stochastic inputs p25

PREDICTIVE CONTROL

Frequency based tuning of SISO controllers for two-by-two processes p49
Guaranteeing feasibility in constrained stable generalised predictive control p463
Model predictive control algorithms for systems with slow sampled outputs p551

PRODUCTION ENGINEERING

Control and integration techniques in a fully automated manufacturing cell for carbon composites p159
Error specification, monitoring and recovery in computer-integrated manufacturing: an analytic approach p499
Fuzzy neural networks and application to the FBC process p259
Nonlinear and direction-dependent dynamic process modelling using neural networks p44
Process performance monitoring using multivariate statistical process control p132

PROGRAMMING THEORY

Adaptive scheduling algorithm based on mixed graph model p9
Intelligent controller design for the ship steering problem p17

SELF-ADJUSTING SYSTEMS

Control of rigid robot manipulators via combination of adaptive sliding mode control and compensated inverse dynamics approach p283
Neuro-adaptive hybrid controller for robot-manipulator tracking control p270
Robust adaptive force/motion control of constrained robots p103
Robust indirect adaptive control of the electrohydraulic velocity control systems p448

SIGNAL PROCESSING

Optimal filtering and robust fault diagnosis of stochastic systems with unknown disturbances p31

SIMULATION, MODELLING AND IDENTIFICATION

Analysis of stabilised output error methods p209
Application of a full-order extended Luenberger observer for a position sensorless operation of a switched reluctance motor drive p401
Digital redesign of cascaded analogue controllers for sampled-data interval systems p489
Expert robust decentralised controller for uncertain large-scale systems p519
Identification of linear systems in the presence of piecewise polynomial disturbances p305
Integrated process improvement in design and manufacture using a systems approach p171
Loop transfer recovery for systems under sampled measurements p333
Model reduction with time delay combining the least-squares method with the genetic algorithm p247
Modelling and controlling one-degree-of-freedom impacts p85
Neural network architectures for parameter estimation of dynamical systems p387
Nonlinear and direction-dependent dynamic process modelling using neural networks p44
Optimal filtering and robust fault diagnosis of stochastic systems with unknown disturbances p31
Parameterisation of observers for time delay systems and its application in observer design p225
Reliable online adaptation of models with variable time delays p417
Temporal multiresolution analysis for a quantitative/qualitative interpretation of complex dynamic processes p191
Use of multilayer feedforward neural networks in identification and control of Wiener model p255

STABILITY

Alternative approach to aeroservoelastic design and clearance p1
Analysis of stabilised output error methods p209
Application of Kharitonov's theorem to robustly increase the degree of Hurwitz polynomials p57
Counter-example to a recent result on stabilisation of feedback control systems with infinite delays [and author's reply] p110
Design of a wire-suspended mobile robot capable of avoiding path obstacles p349
Expert robust decentralised controller for uncertain large-scale systems p519
Graphical method of prediction of limit cycle for multivariable nonlinear systems p423
Guaranteed rates of convergence of a class of PD controllers for trajectory tracking problems of robotic manipulators with dynamic uncertainties p186
Guaranteeing feasibility in constrained stable generalised predictive control p463
H_2 robust digital vector control for the induction machine p237
Modelling and controlling one-degree-of-freedom impacts p85
Neuro-adaptive hybrid controller for robot-manipulator tracking control p270
New sufficient condition for robust root clustering of linear state space models with structured uncertainty p244
Optimal strictly positive real approximations for stable transfer functions p537
Output tracking control of uncertain nonlinear systems with an input time delay p309
Output tracking for linear uncertain time-delay systems p481
Parametric uncertainty bounds for performance robustness of linear systems with output feedback p509
PID tuning for integrating and unstable processes p429
Quadratic guaranteed cost control with robust pole placement in a disk p37
Robust adaptive force/motion control of constrained robots p103
Robust control of manipulators using the computed torque plus H_∞ compensation method p64
Robust indirect adaptive control of the electrohydraulic velocity control systems p448
Robust stability for perturbed large-scale time-delay systems p233
Sliding mode control using time-varying switching gain and boundary layer for electrohydraulic position and differential pressure control p325
Stability of zeros of sampled system with fractional order hold p296
Theory of state covariance assignment for linear single-input systems p289
Time-varying sliding modes for second-order systems p455
Two-degree-of-freedom design method of LQI servo systems: use of frequency-dependent weighting matrices for sensitivity reduction p557

SYNCHRONOUS MACHINES

Application of a full-order extended Luenberger observer for a position sensorless operation of a switched reluctance motor drive p401

SYSTEMS THEORY

Adaptive scheduling algorithm based on mixed graph model p9
Anytime heuristic schedule repair in manufacturing industry p114
Integrated process improvement in design and manufacture using a systems approach p171
Learning systems in intelligent control: an appraisal of fuzzy, neural and genetic algorithm control applications p367
Real-time synchronisation of multiaxis high-speed machines, from SFC specification to Petri net verification p164
Temporal multiresolution analysis for a quantitative/qualitative interpretation of complex dynamic processes p191

TIME-VARYING SYSTEMS

Neuro-adaptive hybrid controller for robot-manipulator tracking control p270
Optimal filtering and robust fault diagnosis of stochastic systems with unknown disturbances p31
Sliding mode control using time-varying switching gain and boundary layer for electrohydraulic position and differential pressure control p325
Time-varying sliding modes for second-order systems p455
Use of multilayer feedforward neural networks in identification and control of Wiener model p255

USER INTERFACES

Telerobot control and real-time simulation environment using parallel processing p543
